

Compliance

SafetyNest has been developed to ensure you are meeting all ECE H&S legislation and regulations, both current and planned.

Simplicity

Reduces administration time and simplifies compliance, giving you and your staff time back.

Forms use natural language and simple interactions bridging the gap between all levels of tech-savvy teachers. Less common tasks are funnelled to more experienced staff.

Automation

Automated tools mean the ability to easily record incidents, hazards and issues and quickly generate reports to assist with decision making and improvements.

Pull staff and children information straight from supported providers, upcoming skills or qualification expiries, missed checklist alerts, regular graph reports to your inbox and more.

Extra Features

SafetyNest has an array of extra features including automating your induction processes, documenting training, policy evidence and seven-point safety checking.

HR Tools

Record staff details, upload employment files and headshots, keep a complete position history, view the chain of command, secure exit details and more.

Security levels are set to suit your organisation to ensure privacy needs are met.

Reports can be run or automated to create a list of upcoming staff events.

Regular Updates

We change when things change: up-to-date tools are added to meet relevant criteria and regulations.

Keeping kids safe and centres compliant – with minimal fuss

SafetyNest is a Kiwi-made cloud-based health, safety and compliance software system designed specifically for New Zealand Early Childcare Education Centres.

It provides the best of both worlds – it's an easy-to-use mobile compliance system which helps keep kids safe and it reduces administration for educators, giving them more time to focus on what they do best - teaching and taking care of our tamariki.

SafetyNest has revolutionised our assessment and management of health and safety requirements within our centres. What was once an ad hoc, laborious and inefficient process has now been streamlined, with greater accountability, tracking and allowed for targeted training within our teaching team.

We used to spend approximately 3-4 hours analysing hand written H&S data from incident and accident reports from the rooms prior to our monthly management meetings. Now with a click of a button and we have reports and graphical data to refer to.

Gemma Smith - Director, Gems Educational Childcare

SafetyNest Features

Checklists

Customisable checklists for year-round compliance needs, including emergency drills and maintenance checks.

Illnesses

Quickly record illnesses, track symptoms and record temperature checks throughout the day.

Parent/caregiver reports

Parents are able to easily review incident, injury or medicine details for their child and sign on screen.

Skills and Tools

Staff inductions, policies, self-service qualifications, automatic refreshers. Track training by staff member, position title or team. Get started straight away with your current documents, and test with quiz questions. All signable on screen.

Medicines register

Record category 1, 2 and 3 medicines and who is authorised to administer them. Record doses given to each child and by who, inline with licensing criteria and regulations.

Reporting

Choose from a range of customisable reports, trend lines and interactive graphs. All graph data and reports can be generated regularly and emailed to an individual or group automatically. Preloaded report templates based on ECE best practice. The graph wizard allows you to copy and paste report templates straight from our blog articles, or support staff.

Incident and Injury reporting

Simple to use tools for both kaiako and administrators to record all event, incident and injuries.
