

Efficiency

Reduces administration time and simplifies compliance, giving you and your staff more time back

Accessibility

Accessible via all devices with automated tools to easily record hazards, incidents and issues, and quickly generate reports to assist with decision-making and improvements.

Reliability

SafetyNest has been developed with Auditors, and industry professionals to ensure it meets all H&S legislative requirements, both current and planned.

Extra Features

SafetyNest is not only packed with Health & Safety features. It also has an array of HR tools built-in too.

HR Tools

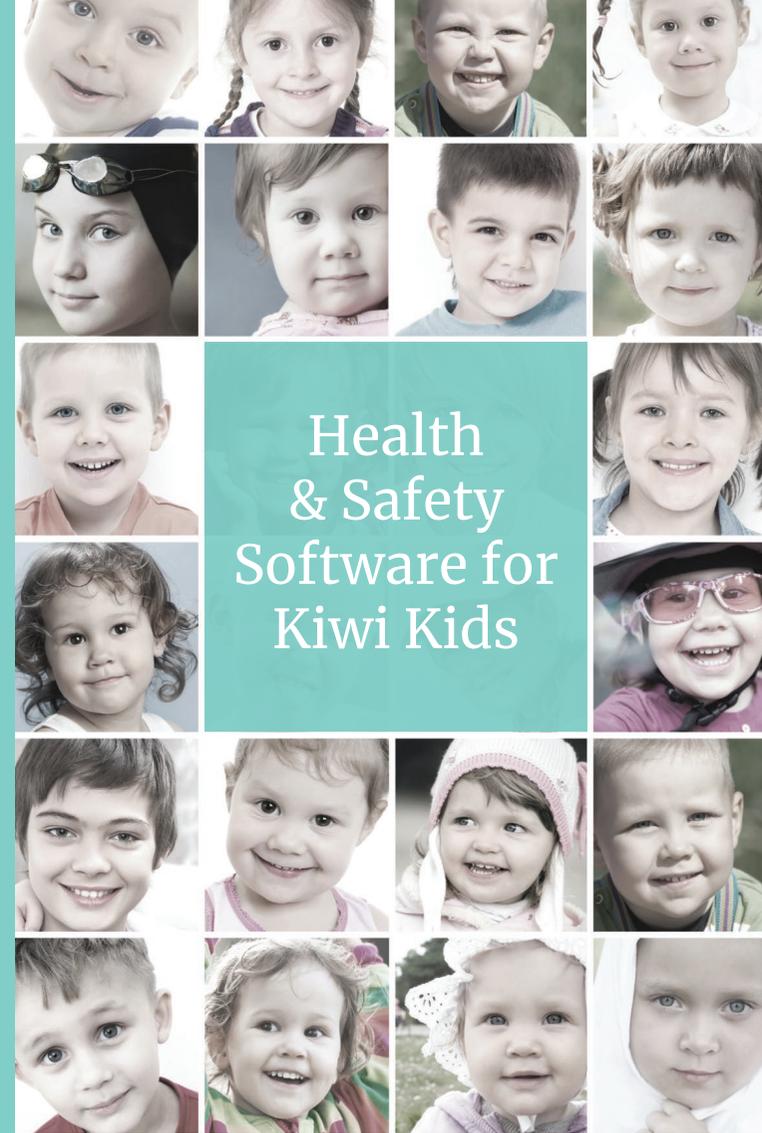

Record staff details, upload employment files and headshots, keep a complete position history, view the chain of command, secure exit details... and much more.

Security levels are set to suit your organisation to ensure privacy needs are met.

Reports can be run or automated to create a list of unsigned events.

Keeping kids safe and centres compliant – with minimal fuss

SafetyNest is a Kiwi-made cloud-based health, safety and compliance software system designed specifically for New Zealand Early Childcare Education Centres.

It provides the best of both worlds – it's an easy-to-use mobile compliance system which helps keep kids safe and it reduces administration for educators, giving them more time to focus on what they do best - teaching and taking care of our tamariki.

SafetyNest has revolutionised our assessment and management of health and safety requirements within our centres. What was once an ad hoc, laborious and inefficient process has now been streamlined, with greater accountability, tracking and allowed for targeted training within our teaching team. We used to spend approximately 3-4 hours analysing hand written H&S data from incident and accident reports from the rooms prior to our monthly management meetings. Now with a click of a button and we have reports and graphical data to refer to.

Gemma Smith – Director. Gems Educational Childcare

Features

Incident Reporting

Have visibility over every event, incident and investigation. Categorise events, flag involved hazards, and attach photos, videos and insurance documentation.

Automatically flag injuries for Parents/ Caregivers to review and sign at pick-up.

No teacher required - Parents/Caregivers can review the incident without a teacher's assistance, allowing teachers to remain on the floor or continue with their task at hand.

eLearning

Create required qualifications, use video training or existing documents, quiz participants, send automatic refresher reminders, or run instructor-led training.

Checklists

Setup daily checklist templates for opening or closing, or for off-site visits.

Attach photo and video guides for unfamiliar users and allow them to attach images, escalate issues, and make suggestions.

Notifications and Workflows

Set automatic reminders for investigations, corrective actions, control implementation and process reviews as well as escalated warnings for overdue tasks and site inspections.

Schedule reports highlighting any areas of concern including process failures, unclosed events and incomplete checklists.

Staff Engagement

Our tools have been shown to increase H&S engagement across teams by providing user-friendly tools for teachers and support staff.

SafetyNest is super simple - feedback shows that even the least technically minded find it easy to use!

Parent Reports

Parents are able to easily review incident reports regarding their child and the sign-on screen.

Reports can be run or automated to create a list of unsigned events.

Risk Register

Take preventative action and put controls in place.

Give controls due dates, review dates and reminders to the assigned staff member.

Supports multiple overlapping registers across different sites or teams.

Teacher Observations/ Logins

No need for all teachers to have separate logins. This keeps administration in the classrooms simple and effective.

Teachers can escalate events directly to appropriate people, including where maintenance is required.

Reporting

Choose from a range of customisable reports, trend lines, and interactive graphs.

All graph and data reports can be generated regularly and emailed to an individual or group.
